## Entry Level Software Engineer Position Description

Sourcereer is looking for an Entry Level Software Engineer (SE) who will provide software and systems engineering design, integration, test and support for two related projects. The SE should have a basic understanding of engineering principles, systems and software development life cycles, and comfortable working with a team in a DevOps environment. The SE will support many technical facets of the project including software development, database development, and some networking support. The SE will be working at a fast pace to solve complex and critical issues, and leveraging unconventional thinking to solve real world problems.

### Location

Ebensburg, Pennsylvania

### Responsibilities

- Support software systems development, integration, testing, and operations.
- Support systems engineering problem resolution.
- Assist with writing technical specifications.
- Collaborate with the development team to coordinate and perform tasks to meet project milestones.
- Apply the appropriate standards, processes, procedures, and tools throughout the system development life cycle to support the generation of technical engineering products.
- Work and learn from more experienced team members to improve personal and the team's overall capabilities.

### Requirements

- Some software development experience.
- Knowledge of the software development process, engineering concepts, principles, and theories.
- BS in Computer Science, Information Technology, or related field.
- Must be proactive, self-directed, detailed, and organized.
- Some experience following a Software Engineering Process preferably focused on Agile development methods.
- Experience with software languages such as Java, Ruby; HTML5, JSON; database technologies; systems integration; and Configuration Management activities.
- Excellent verbal and written English communication skills.
- Ability to hold secret security clearance.
- Willingness to learn new tools, techniques, and work with a team.

### About Sourcereer

Sourcereer supports programs across offices in the U.S. Department of Defense and Commercial Enterprises cross pollinating ideas to lead change, adding value by introducing proven techniques in management, implementing habits to increase productivity, and providing leading edge engineering support to meet any challenge. Sourcereer is comprised of program managers, engineers, cyber security experts, and analysts who are experts in their respective fields. Together we make a team with expansive experience and complementing skill sets that enable us to deliver simple innovative solutions.
